DR264-12

2 Segment String LED Open Reactivate IC with 0.2V voltage drop

General Description

The DR264-12 is a 2 segments open reactivate IC, designed for protecting continuous current switching mode inductive buck LED lighting systems. If any LED in the a continuous current switching mode inductive buck LED lighting system broke down and leave the system open, the DR264-12 will take the place of the LED that broke down and reactivate the entire string of LEDs while consuming less voltage drop than an average LED. The maximum bypass current value of DR264-12 in is 1A. The DR264-12 also provides low voltage drop with 1A bypass current. Built-in OVP and reverse connection protection circuits to avoid protector and LED burnt out.

Features

- 2 serial bypass segments
- Maximum bypass current: 1 A
- The voltage drop of one bypass segment at 1A bybass current: 0.2V
- The total voltage drop of all segments simultaneous bypass at 1A bybass current: 1.6V (only for TO-252 package)
- Reverse protection current of TO-252 package: 1A
- Reverse protection current of SOT-23 package: 400mA

Applications

- LED string lighting

Package Types

- SOT-23; TO-252

Pin Connection

Pin Description

PIN No.	PIN NAME	FUNCTION
SOT-23: 1; TO-252: 2	TERMINAL1	Supply voltage terminal
SOT-23: 2; TO-252: 3	TERMINAL2	Terminal between the first segment and the second segment
SOT-23: 3; TO-252: 4	TERMINAL3	Ground terminal

Maximum Ratings (Ta=25°C, Tj(max) = 150°C)

CHARACTERISTIC	SYMBOL	RATING	UNIT
Local supply voltage between terminal 1 and terminal 3	VLV	8	V
DC voltage of Segment	VDS	4	V
Bypass current	IBP	1000	mA
Reverse protection current	IRP	400 (SOT-23)	mA
		1000 (TO-252)	
Power Dissipation	Pd	0.69 (SOT-23 : Ta=25°C)	W
		2.01 (TO-252 : Ta=25°C)	
Thermal Resistance	Rth(j-c)	100 (SOT-23)	°C/W
		2(TO-252)	
	Rth(j-a)	180 (SOT-23)	
		62(TO-252)	
Operating Temperature	Top	-15 ~ 125	°C
Storage Temperature	Tstg	-55 ~ 150	°C

Recommended Operating Condition

CHARACTERISTIC	SYMBOL	CONDITION	MIN.	TYP.	MAX.	UNIT
Local supply voltage between terminal 1 and terminal 3	VLV	—	4	6	8	V
DC Voltage of Segment	VDS	—	2	3	4	V
Bypass current	IBP	—	150	350	1000	mA

Electrical Characteristics (Ta = 25°C unless otherwise noted)

CHARACTERISTIC	SYMBOL	CONDITION	MIN.	TYP.	MAX.	UNIT
The voltage drop of one bypass segment	VDV(one)	IBP=150mA	0.02	0.06	0.1	V
		IBP=350mA	0.06	0.13	0.2	
		IBP=1A	0.2	0.35	0.5	
The total voltage drop of all segments simultaneous bypass	VDV(all)	IBP=150mA	0.8	1	1.2	V
		IBP=350mA	1	1.2	1.4	
		IBP=1A	1.6	1.75	1.9	
Reverse voltage drop	VRV	IRP=400mA	1.15	1.4	1.65	V
		IRP=1A	1.6	1.75	1.9	
Activating voltage	VAV		6	7	8	V
Supply current	IDD	VLV =8V	1	5	10	uA

Power Dissipation

The power dissipation of a semiconductor chip is limited to its package and ambient temperature, in which the protector requires the maximum bypass current calculated for given operating conditions. The maximum allowable power consumption can be calculated by the following equation:

$$Pd(max)(Watt) = \frac{Tj(junction\ temperature)(max)(^{\circ}C) - Ta(ambient\ temperature)(^{\circ}C)}{Rth(junction-to-air\ thermal\ resistance)(^{\circ}C/Watt)}$$

The relationship between power dissipation and operating temperature can be refer to the figure below:

Typical Application

Note:

When an LED break down and the upper segment of DR264 becomes the alternative current passage, if the overshoot voltage generated by system parasitic inductance leads to the voltage drop of the lower segment exceeding activating voltage, will turn on the lower segment. The phenomena could be eliminated by power reset or adding a 470uH inductance on top of the LED string.

Typical Application

Note:

When an LED break down and the upper segment of DR264 becomes the alternative current passage, if the overshoot voltage generated by system parasitic inductance leads to the voltage drop of the lower segment exceeding activating voltage, will turn on the lower segment. The phenomena could be eliminated by power reset or adding a 470uH inductance on top of the LED string.

The products listed herein are designed for ordinary electronic applications, such as electrical appliances, audio-visual equipment, communications devices and so on. Hence, it is advisable that the devices should not be used in medical instruments, surgical implants, aerospace machinery, nuclear power control systems, disaster/crime-prevention equipment and the like. Misusing those products may directly or indirectly endanger human life, or cause injury and property loss.

Silicon Touch Technology, Inc. will not take any responsibilities regarding the misuse of the products mentioned above. Anyone who purchases any products described herein with the above-mentioned intention or with such misused applications should accept full responsibility and indemnify. Silicon Touch Technology, Inc. and its distributors and all their officers and employees shall defend jointly and severally against any and all claims and litigation and all damages, cost and expenses associated with such intention and manipulation.

Silicon Touch Technology, Inc. reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete.
